

HUMAN HAIR EXTENSIONS CARE

Thank you for choosing our Hair Extensions. When you follow these simple guidelines to maintain your extensions they will continue to look and feel natural for up to 3 months.

You will need to brush through your extensions thoroughly no less than once per day. Part it in layers from the bottom and work through each section. This will avoid matting.

Brush, starting at the ends of the hair, holding each section firmly just above where brushing. Work your way up and when reaching the bonds, press your hand firmly down over them for support. If you have a knot in the hair, be sure to support the hair before brushing the ends, this will prevent you pulling the extensions from the root of your own hair.

The right kind of brush is extremely important. Always use a brush that is firm but flexible. We recommend using The Hair Extension Company's own brush which allows you to brush easily over the rings and allows small knots through rather than pulling the extension hair or a nylon boar bristle-like brush. Never use the kind with "nubs" on the end of the bristles. They will damage your extension hair.

We recommend using a good **Shampoo** and **Conditioner and a Treatment Spray** if possible. The better the products you use, the better the hair will stay. We strongly recommend not using Baby Shampoo, Fructus or Pantene as these contain colour stripping agents. When washing, avoid circular motions as it will cause the hair to tangle. Rinse thoroughly. Apply the conditioner avoiding the scalp. To do so may aggravate slipping of the rings. Pat dry, do not rub or twist the hair while it is wet. Take most of the wet out of the hair before attempting to brush through. Dry using hairdryer on low heat or allow to dry naturally as this stops heat damage – better for the hair but not a necessity!

For the first few days of your style, the extensions will feel tight and some people can develop a rash along the hair line from the extra weight on the scalp. If this occurs, you must try not to scratch and it will disappear in time. This is normal and will more than likely only happen the first time you have Hair Extensions applied. After 3/4 days, the extensions will feel practically natural. It is expected to lose 10-15 single strand extensions (some people lose only 1 or 2). This is completely natural and will not make a difference to the overall look of your style.

We recommend to braid or plait them at night! This is very important and if you can do this most nights, it stops the hair from tangling and matting together while sleeping!

You may use any of your normal styling products with Hair Extensions. The Extension Hair can be coloured darker but not brighter and we recommend that if you are colouring the hair – you test a small section first to test the colour and quality after the colour has been applied. **ENJOY YOUR NEW HAIR!!!**
